Use layers to combine paint styles and depth for impressionisms strokes that stand out

For professionals who like creative control we give them Layers for blending multiple paint styles and brushes to paint on and off the impressionism strokes. We have also included an ultra-impressionism effect called 'Tache' to cover the painting with broken brush strokes or dabs of color that literally stand out—apply them sparsely or cover the entire painting, the choice is yours.

Description

The 19th century brush-wielding Impressionist artists were crazy about flowers and gardens, and it was good. With flowing brush strokes and thickly painted texture, Van Gogh made his sunflowers immortal; with harmonious movement of color, contrast, and form, Monet made his lily pond a celebrity. It took their genius, lifetimes of practice, and navigating the riot of their senses, but these extraordinary artists took what they saw and felt in the petals and leaves and transferred their impressions onto canvasses full of beauty, mood, and meaning.

Lucky you, 21st century software wielding seer and lover of beauty—**you** have Impresso. With the same enduring attention to detail, light, color, and texture, Impresso transforms your photos into multi-textured, stroke-filled Impressionist masterpieces. And keen eyes will love how Impresso maintains the balance of your piece! The result—captivating, print-worthy paintings brimming with passion, life, and beauty.

Features

A pro workflow adds impressionism styles per layer. With layers, users can blend these styles using brushes to paint on or off areas of the painting! Also included is the powerful ellipse detail tool to add finely painted detail to faces, flowers or to create focal points in landscapes. Once placed move, resize then hit the 'Apply' button to render small brushstrokes inside the ellipse. With layers photographers and artists now have the power to composite multiple impressionism styles for impressive results.

Impressionism Paint Styles *

Alla Prima ('wet-on-wet' or 'all-at-once')—is great for portraits! This beautiful paint style starts by filling the painting with an abundance of brushstrokes. A library of artistic finishes compliments this style by adding light, color and movement with controls over strength.

En Plein Air (in open air)—is perfect for landscapes. This stroke-filled effect consists of eight artists' palettes created by famous impressionists. Use them as they are or edit the paint colors to make your own palette—save preset feature keeps the palette and all the layers intact for future projects.

Tache ('spot' or 'blot')—applies broken brushstrokes throughout the image. This technique of laying thick patches, flecks and dabs of color is great for making paint look as if it stands out from the surface. Apply a light spackling of strokes or fill the painting with dabs of color—the choice is up to you!

Canvas—layer is added with each painting created. By creating a canvas layer, it can now be turned on or off for viewing strokes created on layers above. As with traditional methods, the canvas is an integral part of the painting, so we have locked the layer to keep it from being accidentally deleted.

** To add an **Impressionism Style**, use the add (+) tool found on the top of the layers palette. This powerful feature allows you to blend two or more paint styles together.*
