### Usage and Tips

#### Quick Start

Get Photo: Use this to 'Load' or 'Take' a photo

Choose Style tab: **Alla Prima**—is great for portraits and **En Plein Air**—is great for Landscapes

Choose Style Preset: These are the thumbnails under each style. Tap through them to find the perfect look.

**Tip:** Double tap on the screen to zoom out the photo and back in. Use thumb to reposition photo inside the preview area.

Add Detail: Move the ellipse detail tool over the area where detail is needed like a face, or use it as a focal point in a landscape. Resize and rotate the ellipse using your finger on the dots. Tap 'Apply Detail' to render the detail. **Note:** Use the 'Detail Brush Slider' to adjust the stroke size inside the ellipse.

\* These are the quick start steps. If you want to customize the presets, see instructions below.

Save Photo or Share: Choose home icon, then the round 'Save' button . Here you can 'Save' or 'Share' your creation with friends on facebook, instagram, twitter and other social sites.

#### Customize or Refine the Painting

Choose Adjust tab: Use the brush size slider to increase brush strokes in the painting. On this tab you can also enhance the color and add a painted edge (zoom out to see edge). *Note: This only effects the strokes outside the ellipse area.*

Add an 'Artistic Touch': This is where the fun starts! On this tab is a box with an artistic texture on it. Tap to open a library of 70 textures. Choose one, and then increase the 'Artistic Finish' slider to add light, movement and additional strokes to the image.

Choose and Artist Palette (En Plein Air only): Choose from 7 palette colors set up from famous impressionist's palettes. Toggle from 'Limited' and 'Full' for variation and adjust 'Strength' for stronger color.

Change Canvas: On this tab you can change the canvas to linen or use the 'canvas strength' slider to adjust the strength seen on the painting.

Save Photo or Share

#### Randomize Effect & Undo

Use 'Randomize' located at the top of app to automatically change effect settings. Keep pressing this until you like what you see.

Use 'Undo' to revert back to the previous style (allows up to eight undos).
