

## RIP STUDIO

2 years in development, 3 years prototyping, and thousands of hours in the art department, Rip Studio redefines everything you know about a photography and collaging app. It offers super realistic ripped and cut borders, tape, creased and folded images, curled edges with fully 3D shadowing. All with an incredible interface that seamlessly handles layers while maintaining an easy to use workflow.

Designed and engineered for all types of creative professionals and scrap-bookers.

- Create Ads, Music Covers & Collages with Ripped, Cut and Taped Edges
- Comes with a multitude of existing projects to get you started
- Create projects that span a single layer or more

Rip Studio gives you control over every element created inside the app. Rip, tear, or cut edges by drawing around the image. Curl up the edges and wrinkle the surface by simply adjusting a slider. Behind the scene a powerful 3D light engine works to make surface wrinkles and creases look realistic; this adjustable light source will have shadows popping off the page. Finish your creative composition with a tape effect, or choose from a library of objects like stickpins, staples, rusty nails and gems. Every rip you make or tape you place is unique and one-of-a-kind!

**Created for professionals** who want eye-catching elements for their designs and compositions. Quickly rip out shapes and letters by drawing around on your image. Create paper objects for Ads, Music covers, Art Collages and Scrapbook pages with one-of-a-kind cutout, ripped out, taped and pinned shapes made from images or other clipart. With Rip Studio you can throw out those boring overused templates and create a custom piece with complete control over shape, width, fiber, texture and curl.

**Built with PRO features** Rip Studio easily creates a single incredible piece or a whole collage right inside the app! Built with a powerful workflow, you can add images quickly simply selecting them from your library and dropping them—all at once—on the open application. As each image is placed a layer is created for easy compositing, editing and transformation. To finish your composition, choose from a library of gems, stickpins and staples; or add transparent tape, duct tape and masking tape for added interest.

**With a focus on ease-of-use**, ripped pieces can be created by freely drawing on the image or background—if too much is ripped out simply reverse the tool and add the area back in. Also, included in the app is an Image Tool to allow photos to be resized or rotated inside the ripped pieces; or you have the option to completely replace the image while retaining the shape. This powerful feature enables professionals to create custom templates for future use and allows projects to be shared with other artists.

**Rip Studio—is easy, professional and one-of-a-kind**

Available for Mac and Windows

## PRO FEATURES

Rip Studio is a PRO product featuring layers, multiple selection, 3D light for casting realistic shadows, and the best effects designed for Artists, Photographers and other Professionals who require high-resolution on output.

## INCLUDES

### Three Edge Styles + Tape Effect

- **Rip** creates hand-torn edges around images and text
- **Border** adds an adjustable outline with options for color
- **Cut** creates a scissor style cut around edges
- **TAPE** allows adjustable pieces to be placed, moved and resized

## FEATURES

- Rip Effect with control over rip width, roughness and fiber length
- Rip Tool for adding and removing areas to torn and cut paper. Also works on shapes and tape
- Rip Styles to change the look of an edge on-the-fly without redrawing the area
- A cool masking tape, duct tape, cloth tape and transparent Tape Effect. When tape is placed on the edge of the image it auto creases! This can't be done with clip art.
- Masking tape, duct tape and transparent tape with adjustable size, color and surface texture
- Move Image Tool for resizing and moving the image inside a ripped or cut area
- Text Editor for creating ripped, cut, bordered or regular-style letters and sentences
- Smart Layers for composing layouts, collages and easy reordering of objects
- Multiple Selection for moving paper, tape and other objects together
- 36 shapes auto cut images into stars, circles, flowers and more
- 102 high resolution papers
- 18 surface textures
- 62 objects like staples, gems, stickpins and more—with the ability to add your own! All objects placed will create an impression below
- Robust 3D light source casts realistic shadows—globally or independently
- Crease Effect for adding crinkles and creases by simply drawing across the area
- Support for fonts installed on your computer system
- Save Project externally saves projects for future editing and sharing with other artists!
- Save Preset for saving templates inside the app—great for creating custom templates for future use
- Save support for PNG and TIF to preserve transparency behind objects
- Support for high resolution images and output
- Pro's who use the Photoshop and Lightroom Plugin can flag images for batch processing—this features allows photos to be placed right where they want them

## UNIVERSAL FEATURES

Every JixiPix app comes with **superior customer service**, support for high-resolution images and output, quick preview, undo, a randomize button, ready to customize templates and the ability to create and save custom presets.

## ABOUT JixiPix Software
